Heavy-duty drawer slide DCL2307619  
with locking mechanism

**MULTISLIDES**  
KONSEQUENTE QUALITÄT  
**Teleskopschienen<sup>24</sup>**

Pay attention to minimum distance between body and drawer!

Installation length as per product description plus 27 mm release lever.

When using the one-hand locking mechanism, 47 mm of space is required.

Convenient installation thanks to separable inner rail. The inner rail can be removed by loosening the locking screw.

If the ball cage is accidentally located above the locking screw, it can be pushed backwards with a screwdriver.

Side walls of the cabinet body must be parallel.

Side walls of the cabinet body must be flush at the front.

with locking mechanism

Outer rail must run parallel to the floor.

Outer rails must be flush and parallel at the front.

We recommend that the tab on the outer rail should point upwards.

Fasten outer rail with screws.  
For metal body e.g. with flat head screw M6x16,  
for wooden body e.g. flat head screw 6x16 (available in  
our online shop).

When installing the inner rail, the locking lever must point upwards.  
**ATTENTION!** The right and left inner rails must not  
be installed interchangeably.

Fasten the inner rail with countersunk screws. For  
metal body e.g. with flat head screw M6x16,  
for wooden body, e.g. with flat head screw 6x16  
(available in our online shop).

with locking mechanism

No screw heads should protrude from the rear holes.

Incorrect handling can cause the rail to tilt.  
No liability is accepted for irreparable damage.

Before installation, the ball cage must be pushed forwards.

The locking screw must also be screwed back in.

Always operate the levers when closing the drawer.
